

# Best in Class Technology

## for Reliable Web Data Extraction at Scale

**Content Grabber Enterprise is an intuitive yet powerful solution for web data extraction that has unparalleled support for large scale, reliable web data extraction operations.**

It is also the only true end-to-end enterprise web data extraction solution on the market today that facilitates the management of the entire data life cycle.

The only software scraping.pro gives **5 out of 5 stars** on its technical evaluations

It has been specifically designed for corporations with a critical reliance on large scale web data extractions, legal compliance and who demand data quality and reliability.

Content Grabber succeeds where most competitor solutions fail. It includes sophisticated features for monitoring data extraction success, data compliance and production failover that aren't available elsewhere.

See *Businesswire.com*: **WorldQuant Ventures invests in Sequentum as "Sequentum's Content Grabber technology is best in class"**

### USABILITY

- The visual point and click editor is easy to use even for non-technical users.
- Automatically detects and configures all commands types.
- Browser-like view of website data.
- Often no coding is required.

### SUPERIOR TECHNOLOGY

- Extract web data faster and more reliably than any other software, with the help of multithreading, multiple data parser options and numerous other performance tuning measures.
- Extracts data from difficult sites (e.g. heavy JavaScript, AJAX controls, pop-ups) where many competitor solutions fail.

### RELIABILITY & SCALABILITY

- Powerful testing and debugging features help you build reliable agents.
- Solid error handling and error recovery will keep the agents running in the most difficult scenarios.
- Utilize multi-threading and scale across multiple servers.

### INTEGRATION

- Add web scraping capabilities to your own desktop applications with the Content Grabber runtime.
- Build web applications with the dedicated web API.
- Execute web scraping agents on demand directly from your desktop.
- Control job and script behavior via easy to configure settings.
- Easily integrates with third-party Data Analytics / Visualization tools.

### FLEXIBILITY

- Easily move between platforms. You can outsource your data extraction and later move your agents in-house. You don't have to start again.
- Scripting can be used for more precise control if you have unusual requirements or for process tuning.

### LEGAL COMPLIANCE

- For organizations that rely on web data as input to their own data products, Content Grabber helps ensure strict compliance to website data usage terms.
- Auto monitoring a website robot.txt file and delivering data change alerts via email or SMS is built in.

### YOU'RE IN CONTROL

- You can run Content Grabber on your own infrastructure to develop agents and extract content from as many websites as you like.
- You have total control. There are no restrictions on the number of agents you can create, the websites you extract from and there are no monthly data fees.
- You can also control your own data security.

### DATA MANAGEMENT

- Export data in numerous formats including Excel, JSON, XML, CSV and most databases.
- Ability to deliver data to many local and cloud data stores (i.e. Amazon, Azure).
- Data de-duplication.
- Ability to write data directly to custom data structures.

## Content Grabber Enterprise

# Best in Class Technology

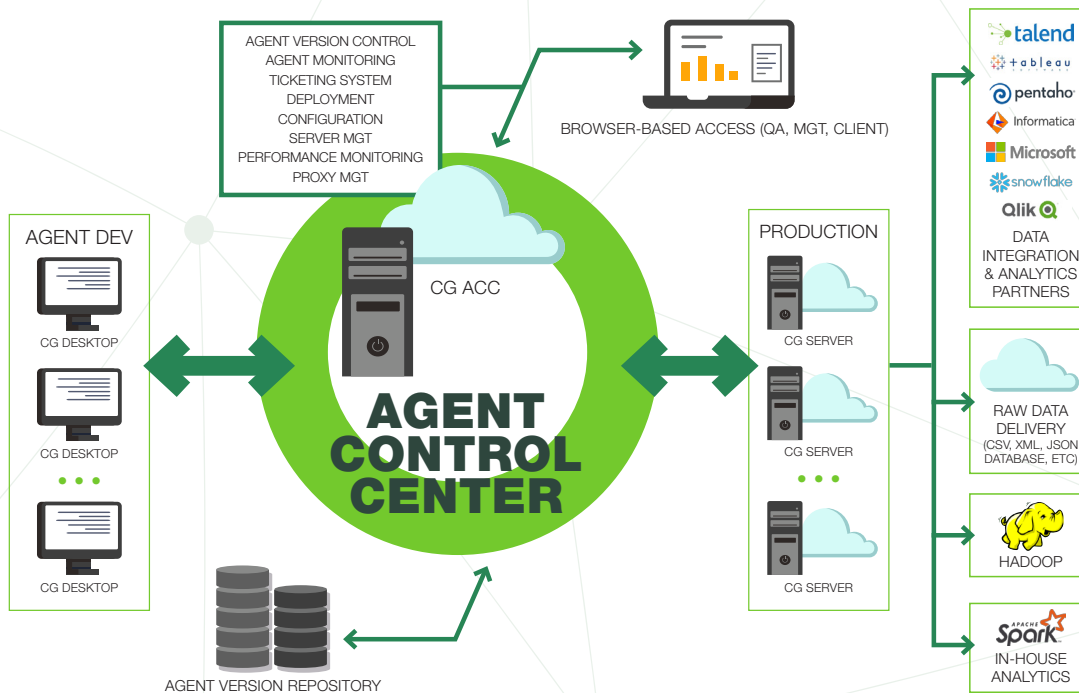

for Reliable Web Data Extraction at Scale

### Content Grabber Enterprise consists of three core license components:

**1. Desktop:** for development & maintenance of agents.

**2. Server:** for running agents in production environments.

**3. Agent Control Center:** to centrally manage all agents, servers, security, software updates, schedules, deployments, user access, proxy pools, support tickets and much more, within your own secure, private infrastructure.

Enterprise for Desktop provides both a development platform for producing web data extraction agents and a production runtime. This license alone can be used for single server operations. Enterprise for Server is an optimized production runtime license which also facilitates basic maintenance of existing agents. When combined with the Agent Control Center, these three provide a fully managed end-to-end enterprise data extraction solution.

### SYSTEM REQUIREMENTS

Content Grabber is a Windows-based software application. Windows 7+ and Windows 2008 R2+ are the supported versions of Windows. If you use a Mac or Linux system, you can use Content Grabber by installing a Windows Virtual Machine. Additionally, your copy of Content Grabber and its agents can run on a Windows Server or VPS.

### RECOMMENDED SYSTEM REQUIREMENTS:

- 64bit Windows 10 or 2012R2
- Intel Core i5-6xxx or equivalent
- 8GB RAM (+2GB of RAM for each agent you want to run in parallel)
- 500 GB internal hard drive
